FOREWORD

This report summarizes all mountain precipitation measurements made in Montana by Soil Conservation Service and cooperators since 1964. Cooperators include: Forest Service, Montana Fish and Game Department, Hill County, Agricultural Experiment Station, Bureau of Indian Affairs, and private individuals.

Precipitation storage gages are being installed in various watersheds to improve accuracy of water supply forecasts by obtaining data in main water producing areas. They are also being used to help refine average annual precipitation estimates in mountainous regions. Most gages are being installed at snow courses or snow pillow sites and will be part of SNOTEL (Snow Survey Telemetry) system being installed by Soil Conservation Service.

In general, gages are located in small mountain meadows or protected clearings and have 10-inch diameter orifices. Each fall, the gages are recharged with a methanol-glycol solution that keeps precipitation from freezing during winter months. A thin oil layer on the surface of the solution prevents evaporation of precipitation.

Readings are usually made near the end of each month or in some cases on a seasonal basis. Precipitation amounts are prorated on a monthly basis using snow pillow records and National Weather Service daily precipitation data.

During winter, the catch efficiency of precipitation storage gages is affected by capping and gage configuration. Comparisons of monthly precipitation measured at adjacent snow pillows and precipitation gages indicate the efficiency of precipitation gages can be as

low as 40 to 60 percent during intense powder snow storms in December and January with annual efficiency about 89 percent. The monthly precipitation total reported herein is adjusted to equal the higher of two values--the precipitation caught in the gage or the amount of increase recorded on an adjacent snow pillow for the same period. If no snow pillows are located near the precipitation gage, the amount caught is the amount reported with no adjustments. Most gages not placed at a snow pillow site are at lower elevations where capping during the winter is minimal.

Agencies and Organizations Cooperating in Montana Snow Surveys

GOVERNMENT AGENCIES

Canada:

Water Survey of Canada, Calgary, Department of the Environment
Water Resources Service, Department of Lands, Forests and Water Resources, British Columbia

Federal:

Department of the Army
- Corps of Engineers

U.S. Department of Agriculture
- Forest Service
- Soil Conservation Service

U.S. Department of Commerce
- NOAA, National Weather Service

U.S. Department of the Interior
- Bonneville Power Administration
- Bureau of Indian Affairs
- Bureau of Reclamation
- Fish and Wildlife Service
- Geological Survey
- National Park Service

STATE

Montana Association of Conservation Districts
Montana Department of Fish and Game
Montana Department of Natural Resources and Conservation
Montana State University - Agricultural Experiment Station
North Montana Branch Station - Agricultural Experiment Station
University of Montana - School of Forestry

PRIVATE

Montana Power Company

Other organizations and individuals furnish valuable information for snow survey reports. Their cooperation is gratefully acknowledged.

FEDERAL - STATE - PRIVATE

COOPERATIVE SNOW SURVEYS

Furnishes the basic data necessary for forecasting water supply for irrigation, domestic and municipal water supply, hydro-electric power generation, navigation, mining and industry

"The Conservation of Water begins with the Snow Survey"
